

Innovative Technologies Complex

Biotechnology Building The Smart Energy Research and Development Building, completed in 2017, houses offices, labs and classrooms for Binghamton's Chemistry Department as well as the Department of Physics, Applied Physics and Astronomy. Research focuses on alternative energy production, harvesting and storage in areas such as thin-film solar technology and next-generation battery production. The \$70 million, 114,000-square-foot building was certified LEED Gold.
